

Learning Activity:

LEARNING OBJECTIVES	EXPANDED CONTENT OUTLINE
The learners will be able to have an idea on the mental health care utilization among school-based adolescents from a developing country, such as the Philippines, where mental health services availability is a big challenge.	This presentation will present the available mental health care services in the locale of the study as well as the utilization of the school-based adolescents to those services.
The learners will be able to identify the differences in mental health care utilization among the school-based adolescents when grouped according to their socio-demographic characteristics.	The presentation will reflect the differences in the utilization of mental health care services.
